A NEW SMILE IN A DAY ALL-ON-4 TREATMENT

Three decades ago, people laughed at the concept of a new smile in a day... flash forward to today with 18 years of documented clinical success and over 250,000 patients successfully treated with the All-on-4® Treatment Concept... and it's no laughing matter! Patients now consider it a modern-day miracle.

Leading practitioners like Dr. Steven Branberg of The DFW Dental Implant Center in Colleyville are offering patients the All-on-4 treatment concept. This cost-efficient, time-saving, graftless solution can provide patients with a fixed full-arch prosthesis on their day of surgery—offering solutions for standard to challenging cases. It's a new day for dental care!

ABOUT DR. B

As a kid, Dr. Branberg wanted to be known as “Dr. Steve” and while he’s known as “Dr. B” now instead, he fulfilled that dream. He was always good at math, science and art in school—and dentistry allowed him to excel in all of these subjects he enjoyed and that also came naturally to him. Plus, he just likes helping people in need. Dr. Branberg started practicing here in 2011, and he’s proud to be a dedicated dentist and prosthodontist who has helped countless patients achieve incredible smile transformations.

ALL-ON-4 | BENEFITS

Dr. Branberg knows from experience that the All-on-4 treatment is restoring more than just a smile—it provides permanent, full-arch dentures connected directly to four dental implants. The prosthesis is fixed, which means it will not come loose when you eat, speak, sneeze, cough, swallow or laugh. This added security quickly boosts the patient’s self-esteem, confidence and overall quality of life. With the number of people missing teeth continuing to rise, these people want immediate function back. The All-on-4 total treatment time is significantly reduced because a fixed (*non-removable*) acrylic temporary bridge is attached on the day of surgery for those who meet the criteria. Otherwise, patients wear a temporary denture while the implants heal. And, this all-inclusive procedure costs much less than traditional dental implant—making it accessible to more patients. It is easy to see why one study found that 98% of patients recommend the All-on-4 treatment to their friends and family.

ALL-ON-4 | IS IT RIGHT FOR YOU

If you have suffered total tooth loss and you want a permanent solution, All-on-4 treatment could be the perfect choice for you. Aside from the aesthetic appeal of implant-retained dentures, many people enjoy a higher quality of life because of their ability to expand their diet and eat healthier foods again—like nuts and fruits. The All-on-4 implant posts also preserve the surrounding teeth by stimulating the jaw bone and prevent the “sunken” look commonly seen in older adults. If you’re tired of your traditional dentures, All-on-4 implants provide a prosthesis that never slips or moves without needing to use special cleaners or adhesives.

ALL-ON-4 | WHAT TO EXPECT

[1] **Attend A Free Consultation.** Before you begin the procedure, you get a free, no obligation consultation. During this meeting, Dr. Branberg customizes one or two treatment options to your unique needs. He also explains the dental implant process and why you should choose them for your implant care. Finally, you receive a treatment plan with an accurate estimate for the cost of treatment, which means that you won’t have to worry about surprise fees.

[2] **Diagnostic Evaluation.** When you’ve decided that you’re ready to move forward with your dental treatment, they will begin the clinical and radiographic examination. After they’ve recorded the necessary information, they will walk you through the procedure, so you know exactly what to expect on your big day.

[3] **The Dental Implant Procedure... Wake up to a New You!** Once you arrive at the dental office, the anesthesiologist will begin to administer the general anesthesia so you will be asleep throughout the procedure. Using the digital treatment plan and surgical guide, Dr. Branberg will remove any teeth, place the dental implants and deliver your new temporary bridge—all in one location.

[4] **Post Procedure Check Ups.** Following procedure, your jaw bone and tissue will require some time to heal. As a result for 2-3 months, you’ll likely need a soft food diet. While healing, you come in monthly to check that everything is healing and integrating according to plan. Note that post-op checkups are no additional cost to you.

[5] **Receive Your Permanent Teeth.** This is the final step! After healing, they start fabricating your new teeth. At the DFW Dental Implant Center, they use a “You-focused Approach.” This allows you to assist them in creating your new smile. You have the freedom to choose the color, size, shape and position of your new teeth so you will leave their office with the smile that you have always wanted.

All-on-4 treatment concept

Don’t let missing teeth, failing teeth or ill-fitting dentures hold you back. DFW Dental Implant Center has the latest dental technology ensuring you the highest quality care. You owe it to yourself to restore your smile and regain confidence. Schedule a free, no obligation consultation now, so you can decide if All-on-4 is right for you.

One team. One location. One cost.
A simpler approach to implant dentistry!

DFW Dental Implant Center provides quality dentistry from a dedicated team of experts in one location. They know how important it is to be able to restore your dental health and self confidence with a long-term solution so they offer third-party financing, accept all PPO dental insurance plans and file claims on your behalf. They also accept cash, checks, debit cards and all major credit cards. Your treatment plan shows a cost breakdown with no hidden costs—it will include everything from start to finish!
