## Creating Healthy Smiles Through Science and Artistry Dr. Steven Branberg of The Dental Implant Center

**Implant Dentistry** | At The Dental Implant Center, patients can feel confident that they are receiving quality dental care from a true dental specialist. Dr. Branberg performs all phases of implant dentistry—from bone grafting to placing the dental implant to delivering the final crown. This comprehensive approach to implant dentistry improves treatment outcomes and shortens treatment time by eliminating the need for patients to travel back and forth between different dental offices. Dr. Branberg provides a wide variety of dental implant services to meet the individual needs of each patient, including single implant crowns, implant bridges, implant dentures, mini implants and full-arch fixed bridges.

**Cosmetic Dentistry** | Everyone loves a beautiful smile, so we offer everything you need to achieve that perfect smile—porcelain veneers, all-ceramic crowns, tooth-colored fillings and professional teeth whitening.

**Restorative Dentistry** | Not everyone needs a dental implant. This is why we offer numerous non-dental implant solutions to fix your teeth, including: crowns, bridges, removable partial dentures and traditional complete dentures. As a Prosthodontist, Dr. Branberg has three additional years of education in implant dentistry and prosthodontics than the average general dentist. He uses his expertise to provide customized treatment options based on what is needed.

**Innovative Technology** | With an in-office 3D CAT scan machine and digital treatment planning software, implant dentistry has never been more predictable and safer. Implant dentistry is a surgical

and restorative procedure that requires knowledge, experience and attention to even the smallest details. The last thing that the patient wants is for an unexpected situation to occur in the middle of the procedure. Dr. Branberg plans all surgical procedures in his digital treatment planning software to eliminate the unexpected. Before beginning any surgical procedure, he has examined the amount of bone, quality of the bone and the location of any vital nerves, blood vessels and sinus cavities.

**In-Office Dental Lab** | With our in-office dental lab, we fabricate flippers, traditional dentures and implant dentures without having to send them to an outside lab. This is beneficial for patients because it shortens treatment time and enables our office to provide more consistent results. Our dental technician is also available to perform same day denture repairs.

**Best Advice** | See a Specialist—because you want a dentist who is going to really think through your options, present them and help you choose which is best.

**Memberships / Licenses** | Dr. Branberg holds current Texas and California Dental (DDS) Licenses, is a member of the American Dental Association (ADA), the Texas Dental Association (TDA), and the American College of Prosthodontists (ACP).

**Our Mission** | The mission of The Dental Implant Center is to treat every patient the way that we would want to be treated by a dental professional.
