

Prosthodontist - Steven Branberg, DDS Creating Healthy Smiles Through Science and Artistry

Specialty | The DFW Dental Implant Center specializes in all types of dental implant procedures, including surgical implant placement, bone grafting, implant crowns and bridges, implant dentures and the All-On-4® Treatment Concept / Teeth-In-A-Day procedure. Unlike other dental implant centers, we also offer a variety of preventative, cosmetic and restorative dental procedures to our patients. This means we not only treat immediate patient concerns, but we can also provide continuing care in the future.

Services | Tooth Extraction, Bone Grafting, Implant Placement, Implant Crowns and Bridges, Implant Dentures, All-On-4 Treatment Concept, Mini Implants, Sedation Dentistry, Routine Exams, Teeth Cleanings, Professional Teeth Whitening, Tooth-Colored Fillings, Porcelain Veneers, Porcelain Onlays and Crowns, Zirconia Crowns and Bridges, Partial and Complete Dentures.

Best Advice To Patients | Do your research when selecting a dental professional for your dental needs. Choosing your dentist based on price alone will usually end up costing you more money in the long run.

What Is A Prosthodontist | A Prosthodontist is a dental specialist who has completed four (4) years of dental school plus three (3) additional years of advanced training and education in an ADA-accredited prosthodontic graduate program. This rigorous training gives Prosthodontists a special understanding of the dynamics of a smile and the preservation of a healthy mouth.

Quality Restorations | The DFW Dental Implant Center prides itself on using high quality dental materials to provide long-lasting restorations that will look and function like your natural teeth.

One Location | Dr. Branberg performs both the surgical and restorative aspects of dental implant treatment, including tooth extractions, bone grafting, implant placement and delivery of your new teeth. He also offers a wide variety of cosmetic and general dentistry services, so you can receive that beautiful smile that you've always wanted.

Innovative Technology | We use the latest in the digital radiography, including low-dose digital x-rays and an in-office 3D CAT scan machine,

to evaluate your teeth. We also offer the latest restorative treatment options, including milled zirconia and titanium frameworks, and all-porcelain veneers, crowns and bridges.

In-Office Lab | Our in-office lab allows us to perform treatment quicker and more predictably by keeping various aspects of dental treatment in-house. We are also able to perform same day denture relines and repairs.

Flexible Payment Options | We accept all major credit cards, PPO dental insurance plans, checks, cash and CareCredit® for third-party financing.

Actual Patient Same Day Tooth Replacement
A 45-year old female patient contacted our office with a chief concern: "I broke my front tooth when I was eating dinner. I need to have it fixed as soon as possible!" After examining the broken tooth and the image taken with our in-office 3D CAT scan machine, we decided that the best option for her would be to remove the broken tooth and replace it with a dental implant and temporary crown all on the same day. A minimally-invasive approach was used, which allowed us to complete the surgery without incisions or stitches. After the procedure was performed, she left with a natural looking temporary tooth. We realize how important your teeth are in everyday life. No one wants to go to work, school or visit with friends with a missing or broken tooth. When a dental emergency happens, Dr. Branberg is available to offer Same Day Tooth Replacement options to get your smile back.

(BEFORE) Broken tooth clinical image | Temporary crown 2 weeks after surgery (AFTER)

My Greatest Professional Accomplishment | Watching the joy on my patients face when they see their new smile for the first time.
