Why Choose DFW Dental Implant Center for Implant Dentures?

- **Multiple denture options suited for any patient**
- **Dr. Branberg is a Dentist with years of prosthodontic training**
- **All prosthetics made by our on-site lab**

Implant Dentures

A BETTER KIND OF DENTURE

Absolutely no more glue and no more adhesives – these are not your grandmother’s dentures!

Modern times demand modern solutions—and implant dentures answer the call for a better solution to your missing teeth issue.

When all of the teeth need to be removed or are already missing, patients have several treatment options. Some of the traditional options have been uncomfortable for most patients and can cause changes in speech or can be displaced very easily when one speaks, eats or swallows. This can be very frustrating! To improve the retention and stability of traditional dentures, patients use denture glues or adhesives to help hold them in place. However with implant dentures, these complications that are associated with traditional dentures have been addressed because they simply “snap” onto the dental implant—which allows patients to eat, speak and sing without the fear of their “teeth” coming loose. This means you can live life and smile with confidence!

BENEFITS OF AN IMPLANT DENTURE

- **Increased retention and stability of the denture**
- **Improved chewing efficiency**
- **Improved speech**
- **Improved taste sensation**
- **Improved self-esteem**
- **No palatal coverage**
- **Easy to clean**
- **More comfortable**
- **Stronger - Titanium-Reinforced**

WHAT YOU CAN EXPECT DURING YOUR DENTAL IMPLANT TREATMENT

STEP 1: Determine the Position of the Dental Implants on the Digital Treatment Planning Software

After reviewing your 3D CAT scan, a surgical guide will be made that allows the implants to be positioned correctly underneath the denture teeth for an ideal result.

STEP 2: Place the Dental Implant Using A Surgical Guide and Deliver Temporary Dentures

A surgical guide will be used to place the dental implants. After the surgery is completed, temporary dentures will be lined with a soft material for added comfort and will also improve the fit as they heal.

STEP 3: Deliver Your New Implant Dentures

After four months of healing, a final impression will be made to begin making the implant denture. After the dentures have been made, the implant dentures will “snap” on to the dental implants providing a stable denture with natural looking denture teeth.
